Continuation of 3. NOTE: The feature "the supply voltage line to receive a first supply voltage based on a first mode of the memory device and to receive a second supply voltage based on a second mode of the memory device, the second supply voltage being different than the first supply voltage" as newly added to claim 1 raises new issue that would require further consideration and search. Regarding claims 9-34, Oliver, 4,567,577, does teach in Fig. 2 the teaching of using NMOS transistor 35 for providing a first supply voltage VSS to two transistors 25 and 27 of the SRAM cell based on a first STANBY/inactive mode and using NMOS transistor 36 for providing a second supply voltage VEE to two transistors 25 and 27 of the SRAM cell based on a second WRITE mode.
